

Fifth Grade

Basic Skills Curriculum

To the Home Educator,

I'm so glad you've chosen our curriculum to guide your child's learning this year. At Plain and Not So Plain Academy, we believe that learning at home doesn't need to be complicated or overwhelming. A simpler approach often brings more peace, more confidence, and more connection between you and your child.

Our method focuses on the basics and builds real-life learning naturally into everyday life. Instead of piling on endless repetition and busywork, we concentrate on strengthening core skills—reading, writing, and arithmetic—so your child can grow with confidence and move forward without fear or frustration. When school feels manageable, children thrive, and you gain more time and freedom to explore interests, hobbies, and hands-on learning together.

If your child struggles with a concept, simply pause and practice it a little more. Keep it light and encouraging. If completing a full worksheet at once feels like too much, divide it into smaller portions and take breaks. There is no stress in this approach—just steady progress.

This 5th Grade Basic Skills Curriculum provides **36 weeks** of simple, structured learning, four days per week. I recommend four days of worksheet learning and one day devoted entirely to life skills, projects, and practical education. This rhythm gives you a complete 180-day school year while still keeping things peaceful and flexible. Have your child complete **four pages per day**.

This is also a wonderful year to focus on reading. If your child doesn't naturally enjoy reading independently, set aside a daily read-aloud time or consider using audiobooks. Listening to good stories builds vocabulary, imagination, and fluency—often without any pressure.

If needed, an answer key is available on my blog under the homeschooling section. I wasn't able to include it in the book due to size limitations.

Be blessed,

Amy Maryon

Finding Patterns

You learn counting early on in life. When we count by 1's we say 1,2,3,4,5...

When we count by 2's we say, 2,4,6,8,10, ...

An ordered list of numbers forms a sequence. We can study a sequence to discover its counting pattern or rule.

What are the next three terms in this counting sequence:

3,6,9,12,____,____,____

As you can see, they are counting by 3's. The next three numbers would be 15,18,21

Your turn:

6,8,10,____,____,____

7,14,21,____,____,____

45,40,35,____,____,____

There are ten digits in our number system. They are 0,1,2,3,4,5,6,7,8,9. The number 254 has three digits. The last digit is 4.

Your turn:

How many digits are in each number:

175,000_____

322,342,222_____

221_____

Common Nouns

Common nouns name people, places, and things. They are general nouns. (not specific).

person- police officer

A police officer helps to keep us safe.

place--- park

We love to take the children to play at the park.

thing- coat

Don't forget to grab your coat before we leave.

Fill in the following blanks with common nouns.

1. The _____ look pretty in the vase.
2. My _____ woke me up by buzzing loudly.
3. My _____ is visiting from Michigan.
4. The _____ sells stamps.
5. The _____ scratched my leg.
6. My _____ is nice and soft.
7. My _____ feels very hot.
8. You can find many _____ in the water.
9. We have a lot of _____.
10. Go find the _____ that you lost last week.

Circle the common nouns in the paragraph below. (9 of them)

In that case, go home and pack a suitcase. Take your list and grab your shoes. Then catch a steamship bound for Europe. When you arrive, go to the nearest restaurant and order a soda. Make sure to be polite to the waitress. When you are finished eating, go to the hotel and rest for the evening.

Write a short paragraph telling about a place that you visited. Use at least 6 common nouns.

Your other task for the day is to read. You can look online at www.plainandnotsoplain.com for book recommendations that we enjoyed reading or do an online search to find something that you are interested in. You should read for a minimum of one hour per day.

Write down the title of the book you are reading and how long you read for today.

Each digit in a number has a place value. The value of a digit depends on its place, or position in the number. We identify the value of the digits in a number when we want to write the number in expanded form. Expanded form is a way of writing a number that shows the value of a digit.

In the number 542, write it in expanded form. It is made up of $500+40+2$

Your turn:

Use digits to write the number five hundreds plus seven tens plus eight ones.

My favorite place to go for the day is to Hendersonville. I like to go on a Saturday morning when it is bustling with people. My favorite place to eat is at Soly Luna's. I love their fajitas. Made with real Mexican tortillas. I then walk down Main Street and look for Sam my friend. He is usually found playing his guitar in front of the Hands-on Museum. He loves his Gibson guitar and can play very well. After we have had a full morning of food and shopping, we like to go relax on his boat, The Sailing Seas. I love Lake Summit; it is such a relaxing lake to boat on. We can usually fish and catch some Rainbow Trout to eat. He prepares the fish on a Coleman campfire stove. I love fresh fish. Numbers that are added are called “addends” The answer to an addition problem is the sum. We can add numbers in any order.

Find the sum of 7,4,3, and 6?

To solve this, look for the ones that add up to 10. 7 and 3=10 and 6 and 4=10. Your answer 20.

Your turn—do as above:

$8+6+2$ _____ $4+7+3+6$ _____ $8+7+2+3$ _____

$7+3+4$ _____ $5+5+3$ _____ $6+2+8+4$ _____

When adding larger numbers, remember to line them up in a column for easier addition. Start on the right and move to the left. If you have to carry over, do so.

Place value

hundred thousands	ten thousands	thousands	hundreds	tens	ones
----------------------	------------------	-----------	----------	------	------

You place a comma counting over every 3 places to separate the numbers. This also helps to make it easier to read. When reading a large number—within the commas read it as a 3-digit number. For example, 321,233. Read the first set of numbers as three hundred twenty-one. Then determine which place value you are in, this one is thousands. So, three hundred twenty-one thousand, two hundred thirty- three. We don't say the word "and". Just say in between the commas and then which value they are worth.

Your turn:

Use words to name 53270

Use digits to write "one hundred fifty thousand, two hundred thirty- four

Use digits to write sixty-three thousand, one hundred seventeen

Use digits to write two hundred six thousand, seven hundred one

Addition and subtraction are inverse operations. This means that one operation undoes the other. If we add 3 and 5, we get 8. If we subtract 3 from 8, we get 5. For every addition fact, we can form a subtraction fact. For example:

$$2+3=5 \quad 5-3=2 \quad 3+2=5 \quad 5-2=3$$

These are called fact families

Write two addition facts and two subtraction facts for each fact family:

In the number sentence, there is a missing addend. The letter w is used to represent the missing addend

$$8+w=15$$

A number sentence with an equal sign is often called an equation. Since eight plus seven equals 15, we know that the missing addend is 7. Notice we did that by subtracting.

Your turn: Find the missing addend

In mathematics we study numbers. We also study shapes such as circles, squares, and triangles. the study of shapes is called geometry. The simplest figures in geometry are the point and the line. A line does not end. Part of a line is called a line segment or segment. A line segment has two endpoints. Sometimes dots are drawn at each end of a line segment to represent the dots. The last visible point on each end of the line segment is considered to be an endpoint. A ray begins at a point and continues without end.

Lines that go  are called horizontal lines. Think the horizon.

Lines that go  are called vertical

Two lines that will never touch are called parallel lines. Two lines that will intersect at one point are called intersecting lines.

Multiplication

If there are 5 rows of desk with 6 desks in each row, how many desks are there in all? You can draw it out to help.

To solve you can count out each individual desk, but that would take some time. Or we can count by the number of desks in each row. 5,10,15,20,25,30. Or we can multiply 5 times 6. The x is called a times sign.

Multiplication helps to get your answer more quickly☺ If I have ten children and each child was going to get four pieces of candy, how many pieces do I need? I can count by tens four times. Or I can count by 4's ten times to get my answer.

Keep working on those multiplication facts to help you memorize them and speed up this process.

count aloud: count by 25 cents from 25 cents to three dollars. Then by 50 cents to five dollars.

mental math:

- $3500+500$
- $2500-500$
- $\$7.50+\2.50
- $10+10-5+10-5$
- How much money is 3 quarters
- One foot is 12 inches. Two feet is 24 inches. How many inches in 3 feet
- If a square is 5 inches on each side, what is distance around the square

Find the missing number of $f-15=24$. We need to find the first number in the subtraction problem. When 15 is subtracted from f , the difference is 24. So, f must be more than 24. We will do the opposite of subtraction which is addition to solve. If we add 24 plus 15, by reading it backwards we can get the answer of 39. Then we plug in the numbers to see if we are correct.

Your turn:

find the missing number of $45-s=21$

Find the missing number of $n-24=48$

Find the missing number of $63-p=20$

Draw a number line marked with integers from -5 to 5

Use words to name $\$4.48$

Verbs

A verb is a word that tells that action or the state of being in a sentence.

Linking verbs do not show action. They link or join a subject to a word in the predicate.

**Let's memorize the linking verbs

Is are am was were be being been

Action verb: Sarah runs in the race.

Linking verb: Sarah is the fastest runner.

Underline the verbs in each sentence. They may be action or linking.

I read a story last night.

My story was about a warm, summer day.

It describes how we play in the lake.

I read it to my mother.

Sarah was in the story.

Collin is a tall boy.

Add a verb of your own to complete the sentences. Write them. Then write action or linking to tell which verb you used.

The boys _____ a snowman today. _____

Sarah _____ a carrot for the nose. _____

Winter _____ my favorite season. _____

Sam _____ one of my favorite friends. _____

My friends _____ sad about the cat. _____

Circle the linking verb and underline the noun that it is linked to the subject.

The book is good.

We are ten miles away from home.

I am tired.

There were many bees in the hive.

He was going to the park.

Fill in the blanks with a linking verb.

I have _____ to that park.

What _____ the name of your sister?

Helping verbs

Helping verbs are the linking verbs plus more.

Is are am was were be being been has had have do
does did may might must can could should would will

Memorize this list too. Helping verbs help to form some of the tenses of main verbs. They express time and mood.

If you see an “ing” verb that is a clue that there is a helping verb in the sentence.

She was running for miles and miles.

Sometimes, more than one helping verb is used in a sentence. This is called a verb phrase.

She had been sleeping for a long time.

Circle the letter of the sentence that contains a helping verb. Remember helping verbs help to set the time and mood of sentences.

- a) We are going to the movies.
- b) We went to the movies.
- c) They ran to the movies.

- a) Sam helped me with my studies.
- b) Sam will help me with my studies.

Simile

A simile is a comparison between two things using the word "like" or the word "as."

Example: It is as hot as the sun in here!

My brother eats like a pig.

Instead of saying that one thing "is" the other, a simile says that one thing is like another.

Each sentence contains a simile. What two things are being compared? Write the two things on the lines.

When Lauren dances, she floats across the stage like a feather.

Joey runs like the wind.

Their baby is as sweet as sugar.

The joke was so funny that I laughed like a hyena.

Your room is as messy as a pig sty.

Explain what each simile means in the following.

After playing all afternoon with Tina, baby Michael slept as soundly as a bear hibernating for the winter.

My brother is as cool as a cucumber.

It is raining like cats and dogs.

Even though she was being laughed at, Kara stood with her head up, as proud and immovable as a mountain.

Your other task for the day is to read. You can look online at www.plainandnotsoplain.com for book recommendations that we enjoyed reading or do an online search to find something that you are interested in. You should read for a minimum of one hour per day.

Handwriting practice lines consisting of multiple sets of three horizontal lines (top solid, middle dashed, bottom solid) for writing sentences.

Fractions

A fraction describes part of a whole. The “whole” may be a single thing such as a whole pie or a whole inch or the whole thing might be a group such as a whole class of students or a whole bag of cookies.

We use two numbers to write a fraction. The bottom number is called the denominator, shows the number of equal parts in the whole. The top number is called the numerator, it shows how many of the equal parts are counted.

3 numerator

4 denominator

This is how we read these common fractions:

$\frac{1}{2}$ = one half

$\frac{1}{4}$ = one fourth

$\frac{3}{4}$ = three fourths or three quarters

$\frac{1}{10}$ = one tenth

How many cents is one fourth of a dollar?

The word fourth means that the whole dollar (100 cents) is divided into four equal parts.

$$100 \div 4 = 25$$

In each fourth there are 25 cents

One fourth of a dollar is 25 cents

Three fourths $\frac{3}{4}$ of a dollar is 75 cents

One tenth of the 30 students ate pizza for lunch. How much students ate pizza?

One tenth means one of ten equal parts. We can find one tenth of 30 by dividing 30 by 10

$$30 \div 10 = 3$$

One tenth of the 30 is 3, so 3 students ate pizza

Types of sentences

Compound sentences

Compound sentences are sentences with two or more simple sentences joined by a coordinating conjunction, punctuation, or both. As in simple sentences, there are no dependent clauses in compound sentences.

Combine each pair of simple sentences into a compound sentence.

Stephen likes broccoli. Jentzen likes carrots.

Jadyn likes crocheting. Brooklyn likes sewing.

Kayleigh hates cats. Brooklyn loves cats.

I will go to the park. I might go to the zoo.

I will wear the blue skirt. I might wear my brown skirt.

I like coffee. I do not like tea.

Your other task for the day is to read. You can look online at www.plainandnotsoplain.com for book recommendations that we enjoyed reading or do an online search to find something that you are interested in. You should read for a minimum of one hour per day.

Write down the title of the book you are reading and how long you read for today.

Complex sentences

Complex sentences have one independent clause and two or more dependent clauses. The independent and dependent clauses are connected with a subordinate conjunction or a relative pronoun. Remember dependent clauses do not present a complete thought and cannot stand alone as sentences. The dependent clause can be anywhere in the sentence.

Common subordinate conjunctions include: after, although, as, because, before, if, since, when, where, while, until, and unless.

Ex: Since he got a math tutor, his math grades have improved.

The independent and dependent clauses can also be connected with relative pronouns like who, whose, which, and that.

Ex: Mr. Smith, who is a math teacher, tutors Stephen.

By combining simple sentences into complex sentences adds variety and clarity to writing.

Circle the letter that best answers each question:

Which of the following sentences contain two simple, individual sentences?

- a) He is wearing his baseball uniform. He is holding his baseball bat.
- b) He is wearing his baseball uniform and holding his baseball bat.
- c) He is wearing his baseball uniform, although the game was cancelled.

Which of the following sentences contain a compound sentence?

- a) She is eating a salad. She is drinking lemonade.
- b) She is eating a salad, and she is drinking lemonade.
- c) She is drinking lemonade, since she is thirsty.

Which of the following sentences contain a complex sentence?

- a) Mary went jogging. Rose went jogging.
- b) Mary and Rose went jogging.
- c) Before breakfast, Mary and Rose went jogging.

Which of the following sentences contain a complex sentence?

- a) Mike was learning about moose at school. Mike was learning about elk at school.
- b) Mike and Sam were learning about woodland animals at school.
- c) Mike, who loved animals, was learning about moose and elk at school.

We know that multiplication and division are the inverse of each other, right? We have done simple division for example $10 \div 2 = 5$ and we know that $5 \times 2 = 10$ the opposite. Not all division problems will come out evenly. Let's say we divide $16 \div 5 = ?$

$$5 \overline{) 16}$$

To answer this question, we think, "what number of fives is close to but not more than 16?" We answer this with 3. We write 3 above the box and then multiply to show that 3 times 5 is 15.

$$\begin{array}{r} 3 \\ 5 \overline{) 16} \\ \underline{-15} \\ 1 \end{array}$$

The amount leftover is called the remainder. Here the remainder is 1, which means one leftover. $16 \div 5 = 3 \text{ r}1$

FRACTIONS

Fractions show a part of a whole. They are written like this

$$\frac{3}{5} \quad \begin{array}{l} \text{numerator} \\ \text{denominator} \end{array}$$

You can make an equivalent fraction by dividing or multiplying both the numerator and denominator by the same number. Here is an example:

$$\frac{1}{4} \times 2 = \frac{2}{8} \quad \text{multiply both the numerator and denominator by 2}$$

$$\frac{9}{12} \div 3 = \frac{3}{4} \quad \text{divide both the numerator and denominator by 3}$$

This shows you that both of those numbers above are equal.

This is also helpful in learning how to simplify your fractions and reduce it down to lowest terms. It is much easier to say I have $\frac{3}{4}$ of a candy bar instead of $\frac{9}{12}$.

A fraction is in the lowest terms when its numerator and denominator have no common factors greater than 1. Remember the trees? So, to put a fraction to its lowest terms, divide its numerator and denominator by common factors, until they have no common factor greater than 1.

Here is an example.

$$\frac{5}{10} \div 5 = \frac{1}{2} \quad \text{***remember whatever you do to the numerator has to be done to the denominator}$$

$\frac{1}{2}$ is the reduced to lowest terms. Reduce the following fractions to lowest terms:

$$\frac{4}{16} = \frac{\quad}{\quad} \quad \frac{6}{24} = \frac{\quad}{\quad} \quad \frac{5}{30} = \frac{\quad}{\quad} \quad \frac{2}{10} = \frac{\quad}{\quad}$$

Improper fractions and mixed numbers

When the numerator of a fraction is equal to or greater than the denominator, the fraction is called an improper fraction. Here are some examples of improper fractions. $\frac{5}{5}$, $\frac{7}{4}$, $\frac{13}{3}$. When

you have an improper fraction they should be written as whole numbers and one part that is a fraction. Instead of saying $\frac{7}{4}$ you should say $1\frac{3}{4}$.

The bar in a fraction means the same thing as a division sign. When you see $\frac{7}{4}$ it says 7 divided by 4. If you were to write that out as a division problem like this:

$$4 \overline{)7}$$

Then solve.

When you have a remainder, instead of writing it as a remainder (3), you write it as the numerator and the divisor (4) becomes the denominator. Answer is $1\frac{3}{4}$

Let's practice changing these improper fractions to proper fractions with whole numbers. Do them as a division problem so you can get an answer. You will eventually do them in your head.

$$\frac{14}{3} = \underline{\hspace{2cm}}$$

$$\frac{4}{3} = \underline{\hspace{2cm}}$$

$$\frac{11}{5} = \underline{\hspace{2cm}}$$

$$\frac{7}{2} = \underline{\hspace{2cm}}$$

$$\frac{3}{2} = \underline{\hspace{2cm}}$$

$$\frac{16}{5} = \underline{\hspace{2cm}}$$

$$\frac{4}{3} = \underline{\hspace{2cm}}$$

$$\frac{8}{8} = \underline{\hspace{2cm}}$$

$$\frac{32}{32} = \underline{\hspace{2cm}}$$

We measure the passage of time by the movement of Earth. A day is the length of time it takes Earth to spin around on its axis once. We divide a day into 24 hours. Each hour is divided into 60 equal lengths called minutes. Then each minute is divided into 60 seconds.

Besides spinning on its axis, the Earth also moves on a long journey around the sun. The time it takes to travel around the sun is a year. It takes the Earth $365 \frac{1}{4}$ days to travel once around the sun. To make the number of days in every year a whole number, we have three years of 365 days and then one year we have 366 days. A year with 366 is called a leap year.

A year is divided into 12 months. Learn the poem to figure out how many months have how many days. "Thirty days...etc"

A decade is ten years. Century is 100 years. Millennium is 1000 years.

A century is how many decades?

A clock can be either digital or analog. Analog clocks show time with hands that point to places in a circular motion. A quarter of an hour is 15 minutes. A quarter after 2 is 2:15. A quarter to 4 is 3:45. Half past 7 is 7:30.

Elapsed time is the amount of time between a starting time and an ending time. For example, if you start your homework at 4:00pm and finish at 5:15pm, then 1 hour and 15 minutes elapsed between the time you started and time you ended.

Write the time that is a quarter to nine in the morning

The multiples of a number are the answer we get when we multiply the number by 1,2,3,4,and so on. Multiples of 10 all end in zero. 10,20,30,40,...

Any multiple of 10 can be written as a number times 10.

$$20 = 2 \times 10$$

$$30 = 3 \times 10$$

Multiples of 100 all end with at least two zeros

100,200,300,400.....

Any multiple of 100 can be written as a number times 100.

$$200 = 2 \times 100$$

$$300 = 3 \times 100$$

When we multiply by a multiple of ten or hundreds, we can just multiple the whole numbers and then add the number of zeros (1 for ten, 2 for hundreds, 3 for thousands)

$11 \times 20 =$ we take $11 \times 2 = 22$ and add a zero 220 is answer

$33 \times 300 =$ take $33 \times 3 = 99$ and add two zeros 9900

Your turn:

$$34 \times 200$$

$$500 \times 36$$

$$400 \times 37$$

$$\$1.25 \times 30$$

**when you multiply with decimals, count over the number it is over in this case it is 2 times and multiply normally and move over your decimal two times in your answer.

Rounding numbers

The attendance of the game was 614. 614 is rounded to about 600 people who attended the game. The price of the shoes was \$48.97. The shoes cost about \$50.

Numbers that have been rounded usually end in one or more zeros. When we round a number, we find another number to which the number is near. When you are rounding a number, underline the place value you are rounding and then look to the right. If that number is 5 or more (which is halfway) your number goes up. If it is less than 5 you go back to the nearest rounding number.

For example, 67, rounded to the nearest tens. Underline the 6 and look at the 7. The seven is more than 5, so we round 67 up to 70. 67 is in between 60 and 70.

For example, 43, rounded to the nearest tens. Underline the 4 and look at the 3. Since it is less than five, we go down to the nearest tens, which is 40. 43 is in between 40-50.

You try, round to the nearest hundred 523. It is in between 500 and 600. So underline the 5 and look at the 2. Since it is less than 5, we go down to 500.

Your turn:

Round to the nearest ten:

Perimeter

We know to find the distance around a square or rectangle, we add up all the sides.

If a rectangle's sides measure 3 cm long and 2 cm wide, its perimeter is 10 cm.

How do we find the perimeter of a circle? The distance around a circle is called circumference. The center of the circle is the middle point. The radius is the distance from the center to the curve. The diameter is the distance across the circle through its center. Thus, the diameter is twice the radius.

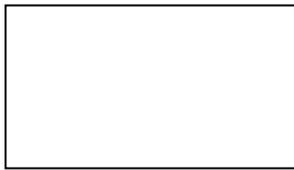

If I were to say the diameter is 4 inches long, the radius would be? 2 inches long

Dividing 2-digit numbers that are multiples of ten. Multiples of ten are 10,20,30,40,We will continue to follow the four steps of the division algorithm: divide, multiple, subtract, and bring down. The divide step is more difficult when dividing by two-digit numbers because we may not quickly recall two digit multiplication facts. To help us divide by a 2-digit number, we may think of dividing by the first digit only.

To help us divide this:

$$30 \overline{)75}$$

We may think $3 \overline{)7}$

We use the answer to the easier division for the answer to the more difficult division. Since $7 \div 3$ is 2, we use 2 in the division answer. We complete the division by doing the multiplication and subtraction steps.

Notice where we placed the 2 above the box. Since we are dividing 75 by 30, we place the 2 above the 5 of 75 and not above the 7.

$$\begin{array}{r} 2R15 \\ 30 \overline{)75} \\ \underline{-60} \\ 15 \end{array}$$

The 2 above the 5 means there are two 30s in 75. This is correct place.

Your turn:

The staff arranged 454 chairs in the school gymnasium. Each row contained 30 chairs, except the last row. How many complete rows are in the arrangement? How many chairs in the last row? Divide this out

Divide $60 \overline{)725}$

$$50 \overline{)610}$$

$$20 \overline{)\$3.20}$$

$$40 \overline{)\$4.80}$$

We know in a division problem; the leftover amount is called the remainder. Sometimes we need to write it as a mixed number. Here is how it is done.

If two children share 5 cookies, equally how many cookies will each receive?

$$\begin{array}{r} 2 \frac{1}{2} \\ 2 \overline{) 5} \\ \underline{-4} \\ 1 \end{array}$$

We divide 5 into 2 equal parts. We find that the quotient is 2 and the remainder is 1. Each child will receive two cookies and there will be an extra cookie. We can take the extra and divide it in half. Then each will receive $\frac{1}{2}$. To write a remainder as a fraction, we simply make the remainder the numerator of the fraction and make the divisor the denominator of the fraction.

Your turn:

A 15-foot-long board is cut into 4 equal lengths. How long is each length?

Divide 17 by 4 with a mixed number remainder

Divide 49 by 10 with a mixed number remainder

Divide 77 by 6 with a mixed number remainder

Evan baked a pie. After dinner, he and his family ate $\frac{1}{3}$ of the pie for dessert. What fraction was not eaten?

If we have 1 whole pie and take away $\frac{1}{3}$ of that, what is the answer?

1 whole pie is cut into 3 pieces so $1 = \frac{3}{3}$ then we subtract from $\frac{1}{3}$

Answer is $\frac{2}{3}$

Your turn: Subtract $1 - \frac{1}{4} =$

$1 - \frac{2}{3} =$

$$2\frac{5}{8} + \frac{3}{8} =$$

$$2\frac{7}{8} - \frac{3}{8} =$$

Subtract fraction from whole numbers greater than one.

Imagine we have 4 whole pies on a shelf. If someone asks for half a pie, we would have to cut one of the whole pies into 2 halves. Before removing half of a pie from the pan, we would have 4 pies, but we could call those pies $3\frac{2}{2}$

We use this idea to subtract a fraction from a whole number. We take 1 from the whole number and write it as a fraction with the same denominator as the fraction being subtracted. We will answer the problem $4 - \frac{1}{2}$ It becomes $3\frac{2}{2} - \frac{1}{2} = 3\frac{1}{2}$

Your turn:

There were 5 pies on the shelf. The server gave $\frac{1}{3}$ of the pie to the customers. How many pies remained on the shelf?

Subtract $3 - \frac{3}{4} =$

6 - $1\frac{2}{3} =$

Place value with money chart

hundreds	tens	ones	decimal point	tenths	hundredths
\$4	3	2	.	3	2
\$100bills	\$10 bills	\$1 bills		dimes	pennies

What is the place value of the 4 in \$6.24?

The 4 is in the second place to the right of the decimal point, which is the hundredths place. This is reasonable because 4 shows the number of pennies, and a penny is a hundredth of a dollar.

Is \$3.67 closer to \$3.60 or \$3.70?

We round \$3.67 to the nearest ten cents, that is the tenths place. Since 7 cents is more than half of a dime, it rounds up to \$3.70

Your turn:

What is the place value of the 5 in each of these numbers

\$25.60 _____ \$54.32 _____ \$12.75 _____ \$21.50 _____

Decimal values, go beyond just money. They keep going to the right just as they keep going to the left. Learn the place value.

Use words to name the decimal number 12.25

Use digits to write the decimal number ten and twelve hundredths

Use digits to write the decimal number two and thirty-two thousandths

**put a place holder of zero to move the number over to the thousandths place

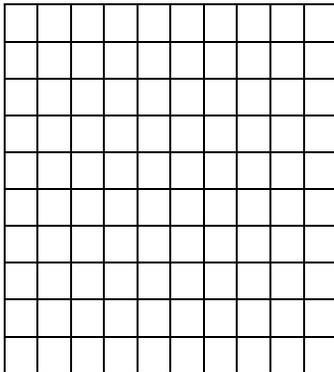

For example. One slice of pizza that is cut into ten pieces can be represented as $\frac{1}{10}$. This same quantity can be represented in decimal form as 0.1 (read one tenth). Five slices of the same pieces can be written as $\frac{5}{10}$ or 0.5 (read as five tenths).

Fractions with 100 parts such as pennies are written with a denominator of 100. Seventy-five pennies is $\frac{75}{100}$ of a dollar in fraction form and 0.75 in decimal form. Eight pennies can be written as $\frac{8}{100}$ or 0.08. The placement of the 8 is very important. A misplaced decimal point can change .08 to 0.8

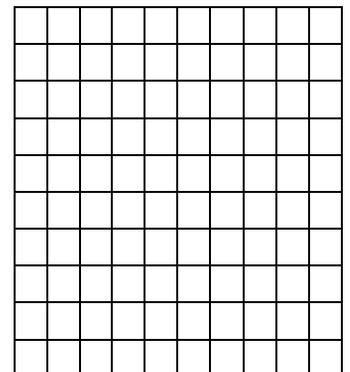

Always read a decimal as a fraction. Read 3.14 as (three and fourteen hundredths) not as three point fourteen or three point one four. The word "and" is used to separate the whole number from the decimal fraction. Read 214.37 as "two hundred fourteen and thirty seven hundredths"

Negatives and Double negatives

A negative sentence states the opposite. Negative words include: not, no, never, nobody, nowhere, nothing, barely, hardly, scarcely, and contractions containing the word not.

Double negatives occur when two negative words are used in the same sentence. Don't use double negatives; it will make your sentence positive again and it is poor grammar.

Negative: We do not have any soup in the pantry

Double negative: We do not have no soup in the pantry.

Negative: I have nothing to wear to the party.

Double negative: I don't have nothing to wear to the party.

Identify which of the following has a double negative. Put a big X on the line.

_____ Mary hasn't done nothing to make him angry.

_____ It makes no difference to me.

_____ I went back to get more soup, but there wasn't none.

_____ I haven't ever seen no peacocks.

_____ We looked for gold, but there was none.

Your other task for the day is to read. You can look online at www.plainandnotsoplain.com for book recommendations that we enjoyed reading or do an online search to find something that you are interested in. You should read for a minimum of one hour per day.

Write down the title of the book you are reading and how long you read for today.

Because the decimal point shows you the value of each digit in a decimal, you can add zeros after the last digit of a decimal without changing its value. You can add zeros before the decimal point. All the decimals below are equal.

$$0.5 = 0.50 = 00.50 = 00.500 = .5$$

No matter how many zeros are added after the decimal point, the decimal point shows that 4 is in the one's place

$$4 = 4.0 = 4.00 = 4.000$$

Learn to simplify decimals that have extra zeros

$$0.240 = .24$$

$$38.00 = 38$$

If you have 38.01 you cannot simplify that, ONLY if the zeros are to the right after the numbers

Reading decimals on a number line

Can you find on the line where 5.3 would be? How about 5.2?

Since it is divided into 10 parts, each part is 1/10 of a mark. 5.1 then 5.2 then 5.3 etc

Comparing decimals

Remember when you compare numbers, you start with the greatest place value.

Compare 8.82 and 8.98

compare the ones place $8=8$

Compare the tenth's $.8 < .9$

Then $8.82 < 8.98$

$7.77 \underline{\hspace{1cm}} 8.98$

$7.07 \underline{\hspace{1cm}} 7.77$

$4.99 \underline{\hspace{1cm}} 4.999$

$3.343 \underline{\hspace{1cm}} 3.043$

$58.765 \underline{\hspace{1cm}} 58.766$

$.878 \underline{\hspace{1cm}} .888$

$54.87 \underline{\hspace{1cm}} 5.487$

$84.88 \underline{\hspace{1cm}} 8.855$

$432.876 \underline{\hspace{1cm}} 876.9$

$32.001 + 2.4 + 27.24 =$

$34.87 - 4.49 =$

$34.00 - 24.64 =$

To convert a decimal to a fraction, remove the decimal point and write the decimal over a power of ten. If the decimal goes to the tenths place, place it over ten; if the decimal goes to the thousandths place, place it over 1000. Reduce the fraction to lowest terms.

Examples: $0.45 = \frac{45}{100} = \frac{9}{20}$

$0.007 = \frac{7}{1000}$

Convert the following decimals into fractions.

$0.23 = \underline{\hspace{2cm}}$

$0.11 = \underline{\hspace{2cm}}$

$0.87 = \underline{\hspace{2cm}}$

$4.2 = \underline{\hspace{2cm}}$

In decimal division, the divisor must be a whole number. The decimal point must be moved to the right until the divisor is a whole number, but you cannot make a change in the decimal divisor without making the same change to the dividend. If you moved the decimal one place to the right, you have multiplied the divisor and the dividend by 10. Place the decimal point in the quotient directly above the newly placed decimal point in the dividend. Think of the division problem $3.4 \div 1.2$ as a fraction $\frac{3.4}{1.2}$ multiply both the numerator and the denominator by 10 to make an equivalent fraction. The new (equivalent) division problem is $34 \div 12$

$$1.1 \overline{) 12} = 11 \overline{) 120}$$

$8.4 \div 2.1 = \underline{\hspace{2cm}}$

$1.872 \div 0.36 = \underline{\hspace{2cm}}$

$0.4712 \div 1.24 = \underline{\hspace{2cm}}$

$1.12 \div 8.0 = \underline{\hspace{2cm}}$

Remember when we learned how easy it was to multiply by 10,100,1000, etc.? Just add the same amount of zeros, right?

In decimals and multiplying by 10, 100, 1000 etc., you move the decimal to the right the number of zeros. If you need to add more zeros do so.

In dividing by 10,100,1000 you move the decimal to the left the same number of zeros. If you need to add more zeros do so.

Ex. $34.87 \times 100 = 3487$

$0.67 \times 1000 = 670$

$93.79 \div 100 = 0.9379$

$643 \div 10000 = 0.0643$

$4.2876 \times 100 =$ _____

$0.65 \times 1000 =$ _____

$654.875 \times 10000 =$ _____

$0.654 \times 10 =$ _____

$65.87 \div 1000 =$ _____

Positive and Negative numbers

On a Celsius thermometer, zero degrees is the temperature at which water freezes. A common room temperature is +20 and -10 is the outdoor temperature of a very cold winter day.

The number +20 or 20 is a positive number. You read it as positive 20 or just 20.

The number -10 is a negative number. You read it as negative ten.

You can write positive numbers with or without a + sign. BUT you MUST always write a negative sign with a negative number.

We can show positive and negative numbers on a number line.

Numbers to the left of 0 on the number line are negative. Numbers on the right of 0 are positive. The number 0 is neither positive or negative.

Whole numbers are called integers. The positive integers are +1,+2,+3... the negative integers are -1,-2,-3.....

We use integers in everyday life. For instance the ten dollars you earn for doing a job is an example of a positive integer. When you spend the money on treats. That number is the negative amount you spend.

To mark the sea floor 300 meters below sea level, we can use the negative integer -300 to mark it. To mark a mountain 3,200 feet above sea level, we use +3200.

Comparing integers

An integer on the number line is greater than those to its left and less than those to its right.

$$-6 < -3 < 3$$

A positive integer is always greater than a negative integer. The farther to the left of a negative integer is from zero, the smaller its value.

Practice

$$-3 \underline{\hspace{1cm}} -2$$

$$4 \underline{\hspace{1cm}} -4$$

$$-6 \underline{\hspace{1cm}} -5$$

$$+3 \underline{\hspace{1cm}} +6$$

$$+2 \underline{\hspace{1cm}} -2$$

$$-8 \underline{\hspace{1cm}} -6$$

$$+10 \underline{\hspace{1cm}} 8$$

$$-5 \underline{\hspace{1cm}} -10$$

What digit in 67.89 is in the hundredths place

Use digits to write the decimal number fifteen and twelve hundredths

$100 \div 4 =$

$200 \div 4 =$

$500 \div 5 =$

$32 \times 100 =$

Write the decimal 12.6 with three decimal places: 12.600 *remember you can add zeros to the end and it does not affect the amount 12.6 is the same as 12.600

Your turn:

Write the decimal 7.8 with four decimal places:

Which is bigger: 12.6 or 12.600

Your other task for the day is to read. You can look online at www.plainandnotsplain.com for book recommendations that we enjoyed reading or do an online search to find something that you are interested in. You should read for a minimum of one hour per day.

Write down the title of the book you are reading and how long you read for today.

Fractions, decimals, and percents are three ways to name parts of a whole

Percent

The term percent means "per hundred". A percent compares a number to 100. For example, 30 percent means 30 out of 100 or $\frac{30}{100}$. The symbol % stands for a percent. You write 21 out of 100 as 21%.

To write a percent as a decimal, remember that a percent is always in the hundredths. 35 percent is the same as 35 hundredths.

$$35\% = \frac{35}{100} = 0.35$$

To write a decimal as a percent, think of the decimal in hundredths. Then you can write it as a percent. 7 tenths (0.7) is the same as 70 hundredths (0.70), which is the same as 70%

$$.7 = 0.70 = \frac{70}{100} = 70\%$$

A quick way to write a decimal as a percent is to multiply the decimal by 100. This method works because percents are already in hundredths.

$$.40 = 40\%$$

Write the following as a percent:

$$.30 \underline{\hspace{2cm}}$$

$$.25 \underline{\hspace{2cm}}$$

$$.77 \underline{\hspace{2cm}}$$

$$.98 \underline{\hspace{2cm}}$$

misguide	missguide	misguid	misgyde
imaction	inacshun	inaction	inaktion
incorect	incorrect	imcorrect	incorret
ilegal	illegal	illegul	illeagal

Circle the misspelled word in the sentences below. Spell it correctly on the line.

It was inconvenent for me to pick up Sarah from school.

Sometimes I am inpatient as I am waiting for the school bus to arrive in the mornings.

It was inconsiderate of Sam to missuse her new calculator.

It was inpossible to make a good grade on the difficult science test.

A quick way to write percent as a decimal is to divide by 100.

40%= .40 remember how to move the decimal to the left. Since it is already at the end of the whole number you move it to the left two places for the 2 zeros.

Write the following as a decimal

60% _____ 3% _____ 22% _____

32% _____ 7% _____ 88% _____

Write these fractions as decimal:

30/100 _____ 45/100 _____

Write these decimals as percents:

In the following group of words circle the one that is not a synonym for the others.

happy thrilled sad excited

fearful bold brave fearless

swift stern fast rapid

gaze observe look pitch

eat chew dine starve

health illness sickness disease

hop jump tardy leap

rip ripe tear split

Circle the word that is an antonym for the underlined word.

The lion in the story was very timid.

- a) shy
- b) courageous
- c) careful

The hurricane in the Pacific Ocean was a gentle storm.

- a) kind
- b) huge
- c) violent

The last way is to change them to fractions.
We are going to memorize the common ones.

$25\% = \frac{1}{4}$

$50\% = \frac{1}{2}$

$75\% = \frac{3}{4}$

$10\% = 1/10$

$20\% = 2/10$

$30\% = 3/10$ etc.

$20\% = 1/5$

$40\% = 2/5$

$60\% = 3/5$

$80\% = 4/5$

How you would solve these is to take the percentage number or the decimal number and put it over 100. Then reduce down. $25/100 = \frac{1}{4} = 25\%$

Let's fill in the blanks for the fractions:

$20\% = \underline{\hspace{2cm}}$

$25\% = \underline{\hspace{2cm}}$

$30\% = \underline{\hspace{2cm}}$

$75\% = \underline{\hspace{2cm}}$

$50\% = \underline{\hspace{2cm}}$

Finding a percent of a number

There are 432 people in our church. 45% of them are boys. How many people are boys.

To solve this we find a percent of a number. What is 45% of 432?

Let me share something with you. The word "is" means = and the word "of" means multiply(x)

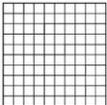

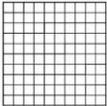

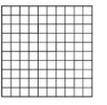

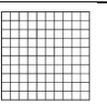

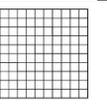

When we solve these, we changed the percentage to a decimal. 45% becomes .45.

Then let's rewrite the formula. $432 \times .45 =$ Now we can solve it. 195 people are boys

Adding and Subtracting Fractions

Step 1 – Find a common denominator (a number that both denominators will go into)

Step 2 – Raise each fraction to higher terms as needed

Step 3 – Add or subtract the numerators only as shown

Step 4 – Carry denominator over

Step 5 – Change the answer to lowest terms

Example #1: $\frac{1}{2} + \frac{7}{8} =$ Common denominator is 8 because both 2 and

8 will go into 8

$$\begin{array}{r} \frac{1}{2} \quad \frac{4}{4} \\ \hline \\ + \frac{7}{8} \quad \frac{7}{8} \\ \hline \end{array}$$

$$\frac{11}{8} \text{ which simplifies to } 1\frac{3}{8}$$

Example #2: $4\frac{3}{5} - \frac{1}{4} =$ Common denominator is 20 because both 4

and 5 will go into 20

$$\begin{array}{r} 4\frac{3}{5} \quad \frac{12}{4} \\ \hline \\ - \frac{1}{4} \quad \frac{5}{20} \\ \hline \end{array}$$
$$\frac{7}{20}$$

Write in lowest terms. Do you remember how to reduce down? Think what is the largest number that will go into both of them. This is like making equivalent fractions, but going down instead of up 😊

$$\frac{5}{30} \quad \frac{21}{35} \quad \frac{18}{27} \quad \frac{12}{15}$$

Combine the following sentences. Leave out words that repeat.

Adding unlike fractions—reduce down to lowest terms

Before we begin, we need to get the denominators the same. We need to decide which is the smallest number that both of these will go into. For example, on the first problem, what is the smallest number that both 10 and 5 will go into? The answer is 10. Then we do that backwards z of making equivalent fractions. The top one stays the same because it doesn't change and the bottom changes to 8. Then we can add normally.

How do we find out how much will fill a container? We need to find the volume of an object. That sort of object needs to be 3d. Imagine a cube, how much could we fit inside of it? We figure that out by using this formula $\text{Volume} = \text{length} \times \text{width} \times \text{height}$

The height inside is 3

width 3 inches To find the volume we take $3 \times 3 \times 2 = 18$ inches cubed or 18 in^3

Length 2 inches

Remember $V = l \times w \times h$

What is the volume of a cube with dimensions 4 ft, 2 ft, 3 ft = _____

The dimensions are 13 in length, 9 in. width, and 2 in height. What is volume _____

The dimensions are 8 ft in length, 4 ft in width, and 3 ft in width. What is the volume _____

How many dimes equal \$1? and \$5?

Reciprocal

If we switch the numerator and denominator in a fraction, the new fraction is the reciprocal of the first fraction. The reciprocal has the same terms, but their positions are reversed. When we switch the position of the numerator and the denominator, we invert the fraction.

The reciprocal of $\frac{2}{3}$ is $\frac{3}{2}$

Whole numbers have reciprocals. Remember that a whole number may be written as a fraction over 1. So, the whole number 2 may be written as $\frac{2}{1}$. The reciprocal is $\frac{1}{2}$

Your turn: What is the reciprocal of $\frac{1}{3}$ of 3?

A quarter is what fraction of a dollar? How many quarters equal \$1?

Which of the following means "How many 25s are there in 500?"

$25 \div 500$ $500 \div 25$ 25×500 500×25
